Observe, Collect, Draw!: A Visual Journal *Georgia Lupi & Stefanie Posavec*

SEE THE WORLD AS A DATA COLLECTOR

DATA PERMEATES OUR DAYS AND OUR LIVES,
IT'S JUST A MATTER OF LEARNING HOW TO
RECOGNIZE IT

"MY SMILES".

"MY COMPLAINTS"

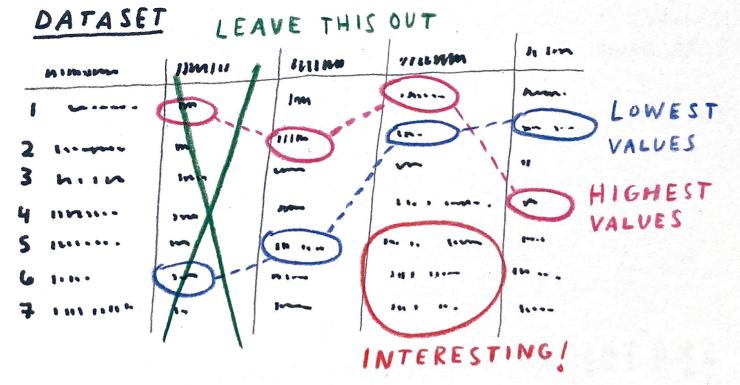

BEGIN WITH A QUESTION

BEGIN WITH A PRIMARY QUESTION:
WHAT DO YOU WANT TO KNOW AND EXPLORE?
THEN ENRICH THE DATA (AND GIVE THE DRAWINGS
DEPTH) BY ASKING ADDITIONAL SMALLER,
CONTEXTUAL QUESTIONS.

SPEND TIME WITH DATA

Before starting to visualize, always analyze and spend time with your data, searching for patterns and trying to understand it at a deeper level.

ORGANIZE AND CATEGORIZE

Often it's good to simplify the data by grouping it into larger categories based on what will best communicate the story.

READING

LEISURE

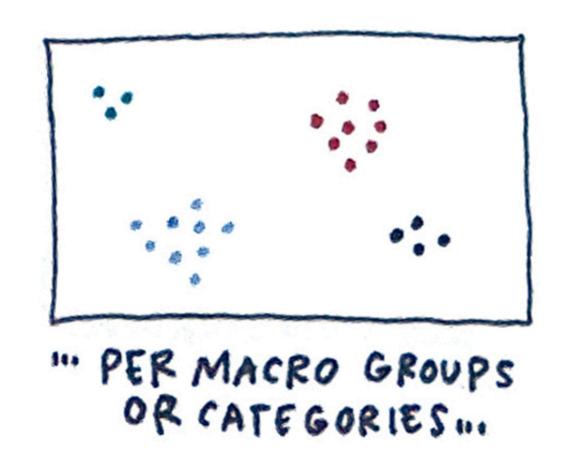

FIND THE MAIN STORY

STARTING WITH PATTERNS
DISCOVERED IN THE DATA,
DECIDE WHAT THE MAIN STORY
IS FOR THE DRAWING.
FINDING THE DATA'S FOCUS
HELPS DECIDE THE LAYOUT

Of A DATA DRAWING.

Categorical show and compare categories

classify and transform into categories

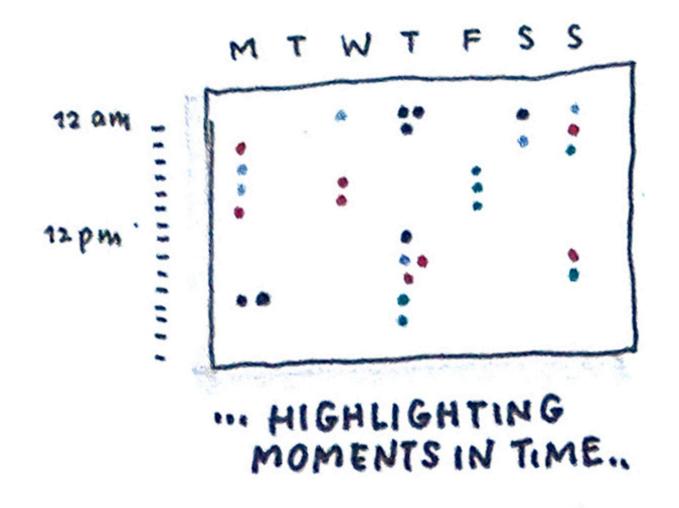

Relational comparing two or more variables

count quantities/(frequenties) of things

(which may stand for a quality or property; or the frequency of things)

Temporal relations or events over time

Measure the temporal position – **when** things happen

Spatial relations or events in space

Measure the spatial position – where things happen

GET VISUALLY INSPIRED

LOSE YOURSELF IN IMAGES, USING THE AESTHETIC QUALITIES OF THE FEATURES YOU ARE ATTRACTED TO AS A VISUAL INSPIRATION FOR THE DRAWING.

SKETCH AND DRAFT IDEAS

ORE IDEAS BY SETCHING AND FULLY EXPERIMENTING WITH , COLOR, AND MATERIALS IN EEHAND FASHION AS YOU DECIDE VISUAL ELEMENTS THAT WILL ESENT EVERY PART OF THE DATA.

TESTING COLORS and TECHNIQUES

IEN SATISFIED DINGS

n't know yet

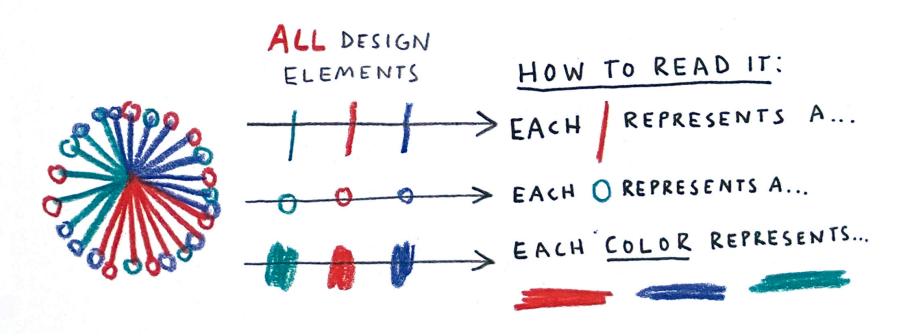

ecific estion)

DRAW THE FINAL PICTURE

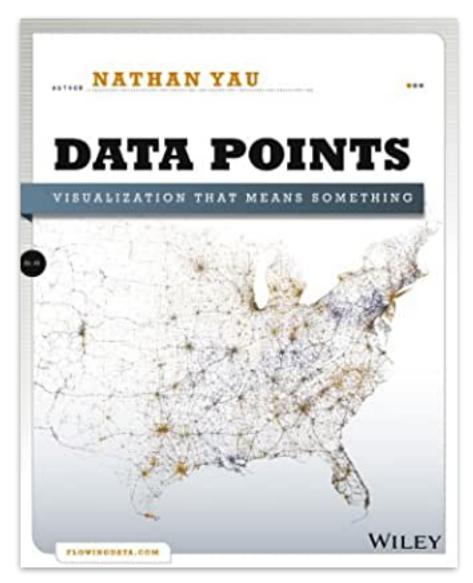

DRAW THE LEGEND

Creating a legend starts with a question: "What does someone need to read my data-drawing?" In the legend, every design element that represents data is listed so the reader understands what everything means.

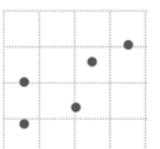

Components

Four components of data visualization

Position

Where in space the data is

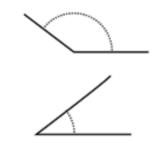

Length

How long the shapes are

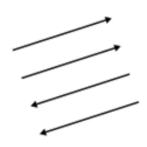

Angle

Rotation between vectors

Direction

Slope of a vector in space

Shapes

Symbols as categories

Area

How much 2-D space

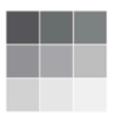

Volume

How much 3-D space

Color saturation

Intensity of a color hue

Color hue

Usually referred to as color

Visual cues

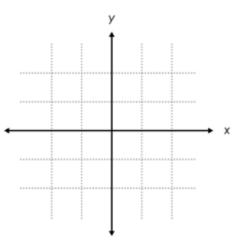

- position
- length
- angle
- direction
- shapes
- area
- volume
- color saturation
- color hue

Coordinate systems

There are a variety of them, from cylindrical to spherical, but these three will cover most of your bases.

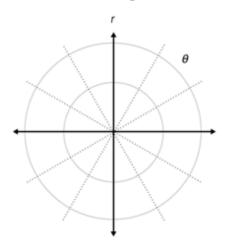

Cartesian

If you've ever made a graph, the xand y-coordinate system will look familiar to you.

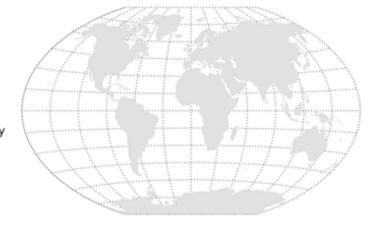

Polar

Pie charts use this system. Coordinates are placed based on radius r and angle θ .

Geographic

Latitude and longitude are used to identify locations in the world. Because the planet is round, there are multiple projections to display geographic data in two dimensions. This one is the Winkel tripel.

Coordinate systems

- Cartesian
- Polar
- Geographic

Linear

Values are evenly spaced

Logarithmic

Focus on percent change

Categorical

Discrete placement in bins

Ordinal

Categories where order matters

Scales

- Linear
- Categorical
- Percent
- Logarithmic
- Ordinal
- Time

Percent

Representing parts of a whole

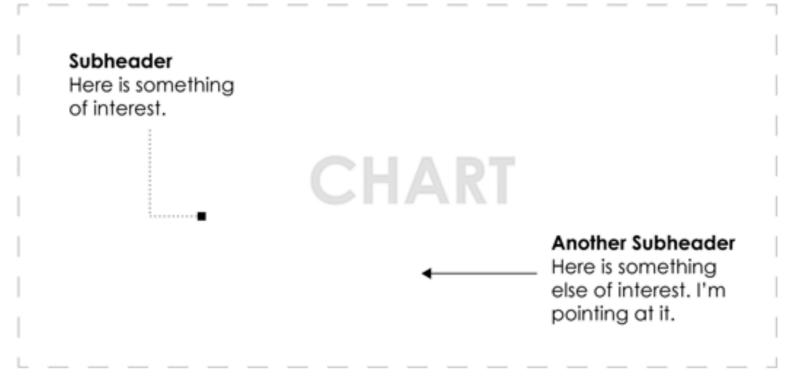

Time

Units of months, days, or hours

Header title that describes findings

Lead-in text is your chance to provide more details on what the data is about, where it's from, and what the audience should see or look at.

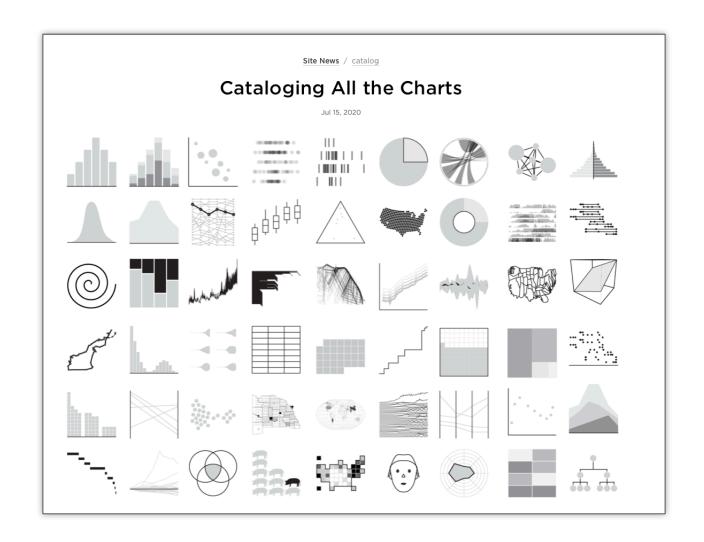

Context

## About measurement & data tables

## What do we mean by measurement?

'Measurement is the representation of relations between objects, persons or groups on a certain property by using relations between numbers.'

- Source: Solid Science: Research Methods by Annemarie Zand Scholten, UvA

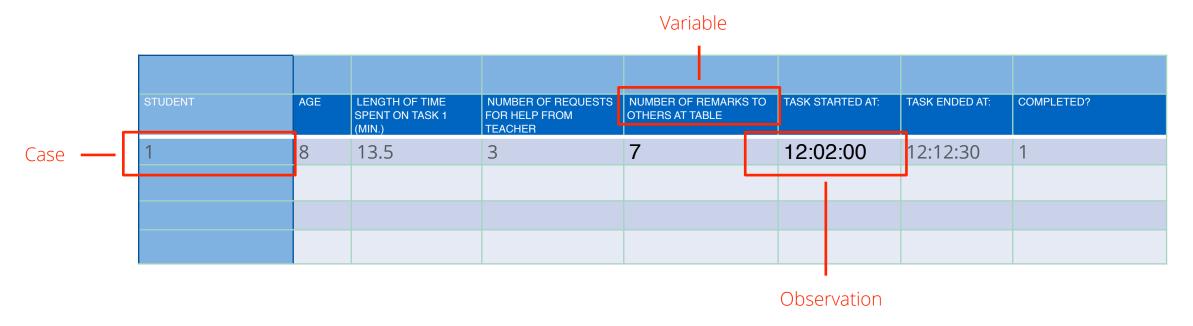

Look at real-life situations and ask: what can be measured here?

# Constructing a data table

Children working on school assignment

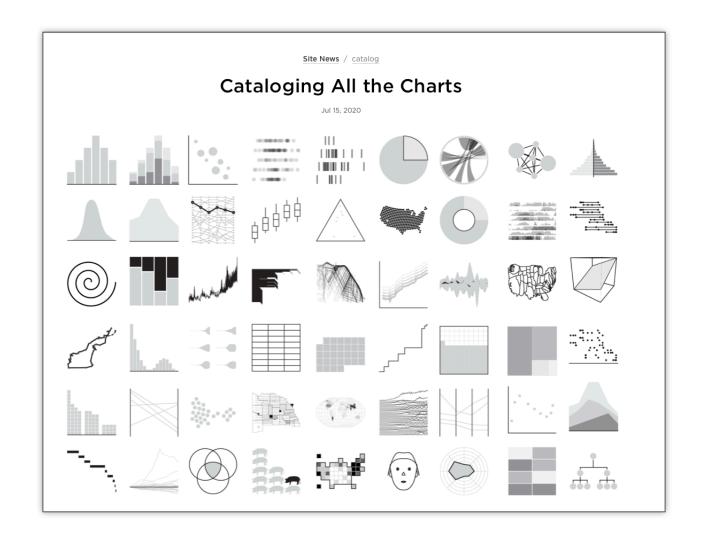

Metadata: which class, school, etc.

Type fiets: 1 = krat; 2 = race; etc.

| Noise                | ****        | -      | <u> </u>   | MMMM      |                     |       |

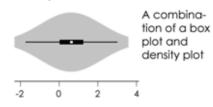

### **Distribution Summary**

You can visualize data at different granularities with the charts above. These show key values for a less specific view of distributions.

Box plot

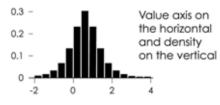

#### Violin plot

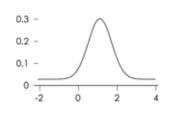

#### Distribution of one variable

You can see where data is clustered and see any outliers by keeping track of where they sit on a value axis.

Histogram

Density plot

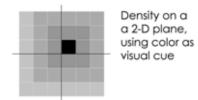

Like histogram but continuous instead of bins

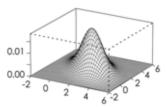

### Distribution of multiple variables

Sometimes values come as pairs, and it makes sense to show both values at the same time.

#### Heat map

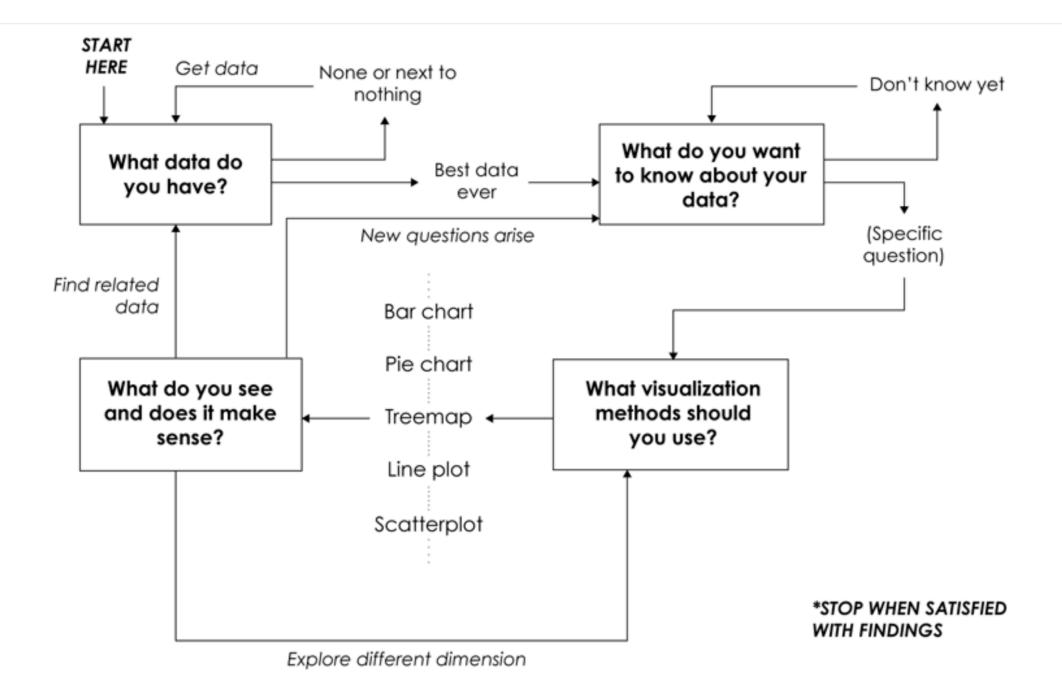

Surface plot

Shows same patterns as heat map, but uses height instead of color Assignment: City & Transport & People

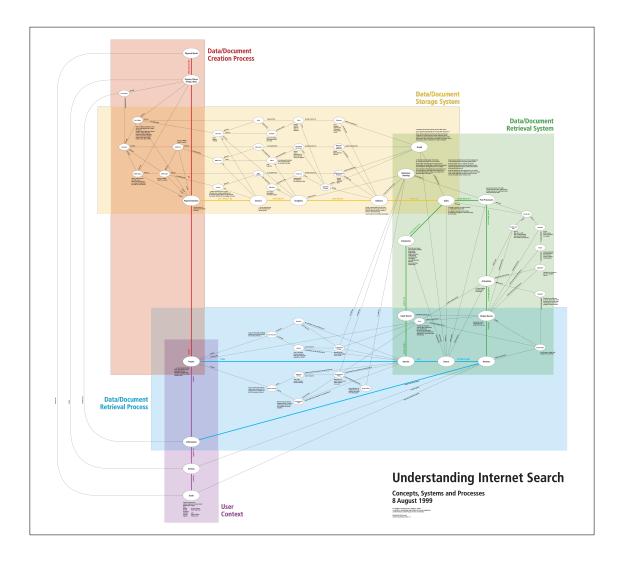

# **About process**

Assignment: City & Transport & People

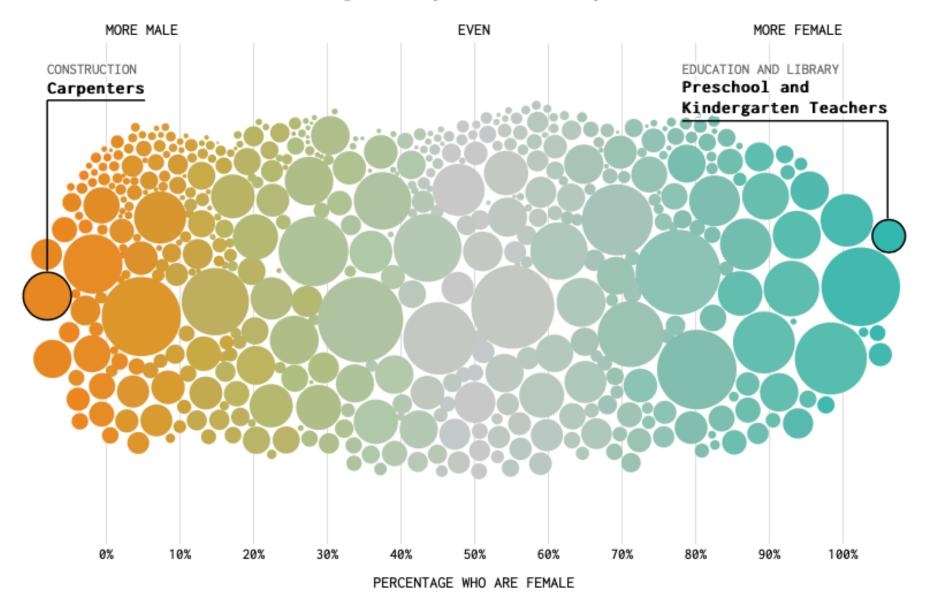

# Examples

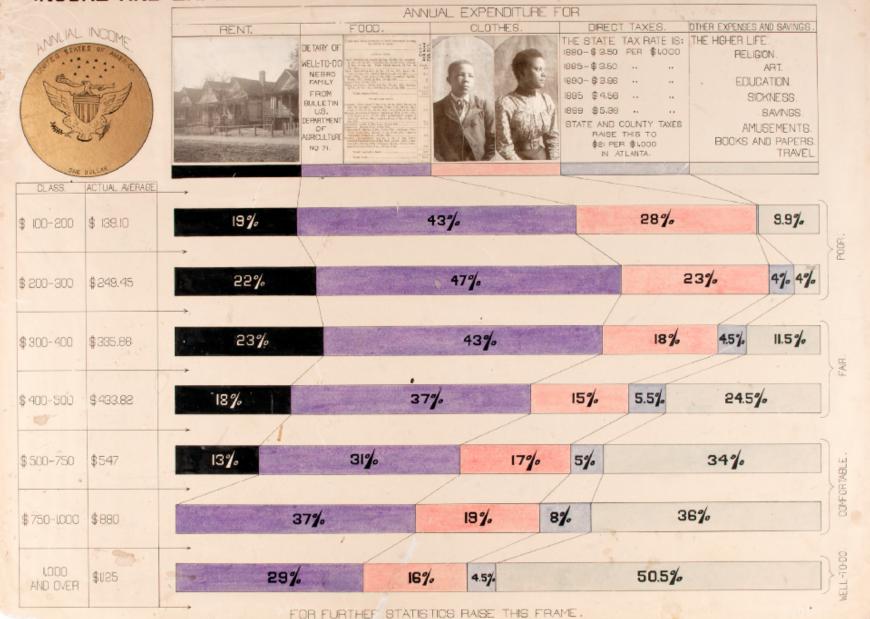

### MALE AND FEMALE OCCUPATIONS IN 2015

 $Larger\ circles\ represent\ more\ common\ jobs.$

## DEAR DATA-WEEK 30

### A WEEK OF BEING ALONE

THE DATA: I COUNTED MOMENTS WHEN I WAS ALONE, ALONE BEING THAT I WAS IN A PLACE FILLED WITH STRANGERS OR IN A PLACE WHERE I WAS PHYSICALLY ALONE. I'VE ALSO DIFFERENTIATED BETWEEN BEING ALONE AND FEELING ALONE.

REPRESENTS A TIME I WAS

THE WIDTH OF THE BAR INDICATES THE LENGTH OF TIME I WAS ALONE IN THIS PARTICULAR SITUATION, SCALED TO THE WIDTH OF THE CARD (= 5 24 HOURS.)

### WAYS I WAS ALONE:

PHYSICALLY ALONE IN A SPACE

ALONE IN ASPACE FILLED W/ STRANGERS

ALDINE IN A CITY OF STRANGERS ( OUTSIDE)

THEONLY TIMES I FELT EMOTIONALLY

### WOM WHAT I WAS DOING WHEN I WAS ALONE:

DOHAMI.
